

Anuj Karn

📍 New Delhi, India ✉ hello@anukarn.dev 📞 +91 9354331322

Summary

- Lead Full Stack Engineer with 6+ years spanning cross-platform mobile (React Native), web (React/TypeScript), and backend (Python, Go, Node.js), now building agentic AI and data platforms on Databricks, GCP and Azure.
- Owns the full delivery lifecycle: architecture, LLM/agent integration, SSO and fine-grained access control, CI/CD, load testing, and ISO 27001:2022 / SOC 2-aligned engineering documentation.
- Led core teams of 5+ and cross teams; cut app build sizes 40% and media load times 60%; shipped white-label products for Sports, PropTech, and Healthcare clients across Australia, Nepal, and the US.

Experience

Lead Full Stack Engineer

PivotX Advisors

New Delhi, India

Apr 2025 – Present

- **Solution Architecture:** Own end-to-end architecture for an agentic AI data platform on Databricks and GCP (React front end, Python/Go microservices, Cloud Run, Databricks Apps); define service boundaries, request flows, and the E2E architecture standard used across the engineering team.
- **AI Engineering:** Design and ship LLM-driven agent workflows and tool-use pipelines (Vertex AI, Claude), including automated code-review agents; author the Agentic AI SOP governing how agents are built, evaluated, and released.
- **Infrastructure & Security:** Architected SSO with Unity Catalog per-user access control (row- and column-level security) and IAM-private service-to-service auth; provisioned environments with Terraform for repeatable, auditable deployments.
- **Compliance & Reliability:** Drove an ISO 27001:2022 / SOC 2-aligned AI delivery lifecycle; defined load/stress testing strategy (JMeter, Python orchestration, Lighthouse CI) and performance baselines before release.
- **Team & Leadership:** Lead engineers across front end, backend, and data; set coding and review standards, mentor through design reviews, and own onboarding guides, operations runbooks, and delivery documentation.

Senior Software Engineer (Contract)

Upstem Technologies

Sydney, Australia (Remote)

Aug 2023 – Dec 2025

- **Mobile Architecture & Leadership:** Architected a sports social-media React Native app from scratch, leading 5 mobile developers; built Fastlane + GitHub Actions CI/CD, cutting App Store submission time by 50%.
- **Performance:** Engineered a high-frequency sports-highlights video feed with AWS MediaConvert and custom React Native players, reducing load times 60% and sustaining 60fps on low-end devices.
- **White-Label Platform:** Refactored a community-engagement app into a scalable white-label codebase (Android Flavors, iOS Schemes), serving multiple nonprofit and enterprise brands from one repository.
- **Payments & Native Interop:** Integrated multi-currency Stripe and property-based theming (Redux Toolkit) for a PropTech rental app; wrote Kotlin/Java bridges for legacy background services during the native Android to React Native migration.

Software Engineer

Leapfrog Technology

Kathmandu, Nepal

Sep 2021 – Aug 2023

- **Supply Chain App:** Built an inventory-tracking app (React Native + Go) for a construction-materials client, with an offline queue for bulk material scanning in low-connectivity zones.
- **Healthcare Platform:** Delivered a HIPAA-compliant appointment booking app for a US healthcare provider; a custom component library and multilingual form handling cut user friction by 40%.
- **Location & Integration:** Integrated Mapbox SDK for address auto-suggest and last-mile delivery tracking in a logistics app; optimized API payloads with backend teams, reducing field-worker mobile data usage by 30%.

Software Engineer

Sunya Health Solutions

Kathmandu, Nepal

Nov 2019 – Sep 2021

- **On-Device Computer Vision:** Bridged OpenCV to React Native via JSI to analyze urine test strips on-device for a point-of-care diagnostics app, raising diagnostic accuracy by 15%.
- **Offline-First Sync:** Engineered a sync engine for a rural health-screening app, resolving conflicts between local SQLite/Realm stores and a remote Django backend.
- **Payments & Revenue:** Integrated regional digital-wallet native SDKs (transaction success +30%) and In-App Purchase subscriptions, driving a 25% increase in recurring revenue.

Education

University of London, UK — *B.Sc. (Hons) Computer Science (Data Science)*

Oct 2020 – Mar 2025

Skills

AI & Data Platforms: LLM application development (Claude, OpenAI), agentic workflows, tool use / MCP, RAG, prompt engineering, Claude Code, Databricks (Apps, Unity Catalog, Delta Lake), Microsoft Fabric, PostgreSQL.

Languages & Frameworks: Python, Go, TypeScript/JavaScript, Kotlin/Java, React, Next.js, Node.js, FastAPI, Django, GraphQL, REST, WebSocket.

Cloud, DevOps & Security: Azure (Functions, App Service, Entra ID), AWS (S3, MediaConvert), GCP, Terraform, Docker, GitHub Actions, Fastlane, JMeter, Lighthouse CI, SSO/OIDC, ISO 27001:2022, SOC 2, HIPAA.

Mobile: React Native, Expo, Native Modules (JSI/Bridge), Redux Toolkit, React Navigation, Hermes, Detox, Jest, Firebase, Offline-First / White-Label Architecture, Stripe, Mapbox.
